Education

Vellore Institute of Technology

Oct 2022 – Jul 2026

B.Tech Computer Science and Technology; CGPA: 8.47/10

Technical Skills

Languages: C, C++, JavaScript, Python, SQL, HTML

Web Technologies: React.js, Next.js, Node.js, REST APIs, JavaScript, Tailwind CSS

Cloud & DevOps: AWS, CI/CD, Jenkins, GitHub Actions, Docker, Linux, Bash

Databases: PostgreSQL, MongoDB

Experience

React Developer Intern *Cufront HealthCare*

March 2025 – May 2025

- Built and shipped production-ready UI features for a healthcare web application using React, focusing on modular, reusable components and responsive layouts to ensure consistency across screens.
- Implemented debounced search with multi-criteria filters to enable efficient discovery of doctors and clinics, reducing unnecessary API calls and improving search responsiveness.
- Integrated REST APIs using React Query, leveraging features like caching and stale time to optimize data fetching, minimize redundant network requests, and deliver a smoother user experience.
- Worked closely with backend engineers and designers to align frontend data requirements, handle edge cases, and ensure seamless API integration across patient and doctor workflows.

Projects

Comprehensive Wellness Platform — *Docker, GitHub Actions, Node.js, PostgreSQL*

[GitHub](#) — [Live](#)

- Built a production-ready, full-stack wellness platform containerized using Docker, with environment-based configuration and secure secrets management.
- Designed and implemented a CI/CD pipeline using GitHub Actions to automatically build Docker images and deploy updates to a cloud virtual machine on code changes.
- Integrated a cloud-hosted PostgreSQL database (Neon) with SSL-enabled connections and implemented OAuth-based authentication and RBAC to support expert discovery, booking, and health tracking workflows.

Serverless Rate Limiter Service — *Node.js, AWS Lambda, Redis*

[GitHub](#)

- Built a backend rate-limiting service using Node.js, AWS Lambda, and Redis, designed to plug into web and mobile APIs to protect user-facing endpoints from abuse.
- Implemented Token Bucket rate limiting with Redis Lua scripts to support per-user and per-API-key throttling, burst traffic handling, and consistent request behavior under concurrent load.
- Exposed the service through API Gateway, dynamically enforcing limits using request metadata (headers, IPs) and returning standardized HTTP responses and rate-limit headers for seamless frontend and client integration.

Scalable Node.js Backend on AWS — *AWS, EC2, ALB, Auto Scaling, Route 53*

[GitHub](#)

- Designed and deployed a production-grade Node.js backend on AWS using a VPC-based architecture with public and private subnets for secure network isolation.
- Implemented an Application Load Balancer with Auto Scaling Groups across multiple Availability Zones to enable high availability, fault tolerance, and automatic traffic-based scaling.
- Integrated Route 53 and ACM for custom domain routing and HTTPS, and configured EC2 instances with process management and environment-based configuration for reliable backend operations.

Achievements and Collaboration

- Solved 300+ problems on Leetcode, strengthening algorithmic thinking and problem-solving skills.
- Participated in the VIT Bhopal University Hackathon, developing an e-commerce PriceTracker and ranked Top 10 out of 50 teams.
- As a CloudZone Club member, organized webinars and events at the university, educating 100+ students.
