Education

Vellore Institute of Technology <i>B.Tech Computer Science and Technology; CGPA: 8.47/10</i>	<i>Oct 2022 – Jun 2026</i>
Dynamic Public School Bhopal (M.P.) <i>Class XII PCM M.P. Board; Grade: 93%</i>	<i>2021</i>
St. Joseph's Sr. Sec. School, Pipariya (M.P.) <i>Class X CBSE Board; Grade: 93%</i>	<i>2019</i>

Technical Skills

Languages: C, C++, JavaScript, Python, SQL
Full Stack Development: Node.js, Express.js, FastAPI, REST APIs, React.js, Next.js, Tailwind CSS
GenAI & NLP: LLMs, RAG Pipelines, LangChain, Vector Databases (Qdrant)
Cloud & DevOps: AWS, Docker, CI/CD, GitHub Actions, Jenkins, Linux, Bash
Databases: PostgreSQL, MongoDB, Redis

Experience

React Developer Intern <i>Cufront HealthCare</i>	<i>Nov 2025 – Jan 2025</i>
◦ Built and shipped production-ready UI features for a healthcare web application using React, collaborating backend engineers to align API contracts, handle edge cases, and deliver consistent, responsive user experiences. ◦ Implemented debounced search with multi-criteria filters to enable efficient discovery of doctors and clinics, reducing unnecessary API calls and improving search responsiveness. ◦ Integrated REST APIs using React Query, leveraging features like caching and stale time to optimize data fetching, minimize redundant network requests, and deliver a smoother user experience.	

Projects

Comprehensive Wellness Platform — <i>React, Node.js, CI/CD, PostgreSQL</i>	<i>GitHub — Live</i>
◦ Built a production-ready full-stack wellness platform enabling users to discover wellness centers, book expert consultations, and track health activities, with a modular React frontend and RESTful Node.js backend. ◦ Designed a scalable backend architecture using PostgreSQL with indexed queries, RBAC, OAuth authentication, and media handling via Cloudinary, ensuring secure and efficient data flow between services. ◦ Deployed the application using Docker and CI/CD pipelines on AWS, configuring load balancing, environment-based configs, and automated deployments to ensure reliability, scalability, and smooth iteration.	
YouTube Q&A Chrome Extension — <i>RAG, FastAPI, LangChain, Qdrant, NLP</i>	<i>GitHub</i>
◦ Built a full-stack Chrome Extension enabling semantic Q&A over YouTube videos using a RAG pipeline with FastAPI, LangChain, and Qdrant vector database, eliminating manual transcript scrubbing. ◦ Engineered an end-to-end NLP pipeline integrating HuggingFace BAAI embeddings, YouTube Transcript API, and Google Gemini LLM to generate timestamp-cited answers grounded in video content. ◦ Built semantic search with cosine similarity and deployed backend on Render with React/Vite frontend.	
Serverless Rate Limiter Service — <i>Node.js, AWS Lambda, Redis</i>	<i>GitHub</i>
◦ Built a backend rate-limiting service using Node.js, AWS Lambda, and Redis, designed to plug into web and mobile APIs to protect user-facing endpoints from abuse. ◦ Implemented Token Bucket rate limiting with Redis Lua scripts to support per-user and per-API-key throttling, burst traffic handling, and consistent request behavior under concurrent load. ◦ Exposed the service through API Gateway, dynamically enforcing limits using request metadata (headers, IPs) and returning standardized HTTP responses and rate-limit headers for seamless frontend and client integration.	

Achievements and Collaboration

- Solved 300+ problems on Leetcode, strengthening algorithmic thinking and problem-solving skills.
- Participated in the VIT University Hackathon, developing an e-commerce PriceTracker and ranked Top 10.
- As a CloudZone Club member, organized webinars and events at the university, educating 100+ students.
